

# Sacred Geometry 101

## *Introducing the Language of the Universe*

Sunday, June 5th  
3:00 – 5:00

Stover's Sejour  
5911 Western Trail  
Greensboro, NC 27410

Registration fee: \$20.00

Instructor: F. Nelson Stover

Sacred Geometry draws on ancient African wisdom that predates Euclid's codification that was utilized by the Greek and later European scholars. Using simply a compass and straight-edge, geometers construct shapes and patterns that mimic natural world forms. During the initial session participants will draw two pictures including a 5-pointed star. Contextual information will help open doorways for further individual exploration after the session.

Participants in Sacred Geometry 101 do not need to have any special mastery of the geometric principles taught in most educational institutions. Carefully guided instructions will allow them to create detailed drawings and understand how to repeat the process. By reflecting on their work, participants will begin to understand how the patterns and processes that permeate the Universe are mirrored in these diagrams.

Mr. Stover has conducted similar programs in village schools in India and for students of all ages on both coasts of the US. The methods used in this approach are based on the principles of Robert L. Powell, Sr. who has taught and worked extensively in this arena for several decades.

No formal academic credentials are required to participate.

For information, phone Nelson Stover (336) 605-0143.
